Host PCB Placement and Clearance

Placement

The antenna is designed to function placed at the left side corner of the host PCB. For a right-hand side version see ARRAKIS b (SZP-C-1L13).

Clearance

A clearance is required through all PCB layers for the precise area shown. No components must be placed within this area otherwise RF coupling from the antenna to any conductor will occur reducing performance significantly. Also, any components such as battery or display must also avoid this area.
